Yo, Dani R. Díaz, El Dragón Berde, director de @InfoVacunas, no respondo ante nada ni ante nadie. Soy un hombre Bere libre y soberano, y solo respondo en línea directa ante el Poder Supremo del Todo Poderoso.

In this I state that

May 14

I published the first video of Magnetic Effect in humans.

The video consists of a compilation of **the first videos that occurred on the networks** about this effect; various people from different parts of the world, showing a strange magnetic effect at the place of inoculation of some of the Covid vaccine variants.

Video: <https://t.me/InfoVacunas/1747>

[Between May 14 and July 10]

I made more than **100 publications** on Magnetic Effect, magnetic nanoparticles, nanotechnology, graphene, and other nanomaterials.

The videos, with a very broad spectrum, include videos of the Magnetic Effect analyzed by multiple professionals from various sectors of society, including doctors and experts in electronic equipment and in the detection of electric and magnetic fields.

It also includes multiple scientific studies and extensive doctoral theses on graphene, as well as a large number of educational videos (videos of general learning on the subject, scientific lectures, talks, visit to the graphene manufacturing laboratory and a large amount of constructive information material).

The following list of links is a **compilation of 70** of these publications

* List posted on May 22, but has been subsequently updated, so it contains links to publications made at later dates.

Compilation: <https://t.me/InfoVacunas/1815>

HIGHLIGHT:

Videos of Magnetic Effect on the 1head are also included. Videos of Magnetic Effect in the place of the injection of the 2pertussis vaccine, 3epidural. News about metallic taste in the mouth referred after receiving injections of 4antibiotics, analgesics, and lidocaine. Videos of Magnetic Effect in 5children and babies.

1(May 21) Video: <https://t.me/InfoVacunas/1794>

2(May 27) Video: <https://t.me/InfoVacunas/1853>

3(May 27) Video: <https://t.me/InfoVacunas/1852>

4(May 27) Publication: <https://t.me/InfoVacunas/1854>

5(June 15) Video: <https://t.me/InfoVacunas/1910>

June 19

I posted the first Magnetic Food video.
In the following days some more were hanged.

Video: <https://t.me/InfoVacunas/1929>

June 28

I echo the report made by Pablo Campra, Doctor of Chemical Sciences and Graduate of Science Biological School of Engineering, in which the preliminary results of the analysis are presented under the microscope of a Pfizer vial.

Publication: <https://t.me/InfoVacunas/1981>

June 29

I make a post titled "Graphene Everywhere, 22 Places You Wouldn't Expect To Find It."

In the publication I have 22 links to places where graphene is being introduced, some are already in use, and others at the moment, they are still just projects.

Publication: <https://t.me/InfoVacunas/1986>

July 2

I publish a saga of 5 videos of Magnetic Men that have been seen on TV. Included between the years 2012 and 2019.

Videos include television showmans, a batter of records, and a worried young man.

Videos: <https://t.me/InfoVacunas/2004>

July 11

I publish the Patent CN112220919A (in -state: pending-) consisting of a Covid vaccine, which uses a liquid base with graphene, as a carrier of the molecular charges of mRNA and Spike Protein to the cells.

**Aqueous Solution with Graphene
+
Covid drug**

Publication: <https://t.me/InfoVacunas/2136>

SOLICITUD DE PATENTE Vacuna para coronavirus con Óxido de Grafeno y proteína Spike

Telegram @InfoVacunas

Utilización de Óxido de Grafeno como plataforma portadora de las cargas moleculares y las proteínas recombinantes del dominio de unión al receptor RBD proteína Spike (S)

July 12

Various alternative information channels spread that the Patent is false, due to an issue related to the URL of the publication of the Patent in Google.patents and the mismatch between the date of publication of the Patent in Google.patents (made 2 days ago) and the date of -Publication- inside the Patent (January 15, 2021).

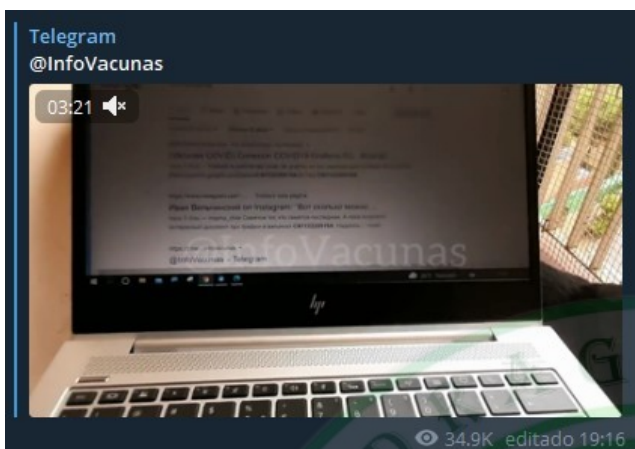

On the same day 12 I show that the Patent is true in 2 different ways:

1- Finding the ORIGINAL Patent on a Chinese government website, and checking the URL of said ORIGINAL publication at Patentimages.storage. and confirming the publication date of January 15.

2- Finding the Patent on the Official European Patent Website.

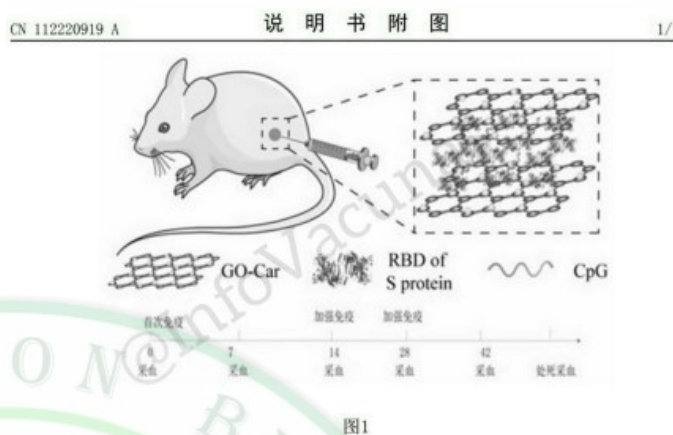

I make several publications about it, and I record my own first video. In which I show live with the PC how I look for the ORIGINAL Patent and how I check the URL of said publication.

Video: <https://t.me/InfoVacunas/2147>

Patent ORIGINAL

Publication: <https://t.me/InfoVacunas/2145>

web of Officials European Patents
Publication: <https://t.me/InfoVacunas/2149>

left patentimages. / right google.patents
Publication: <https://t.me/InfoVacunas/2140>

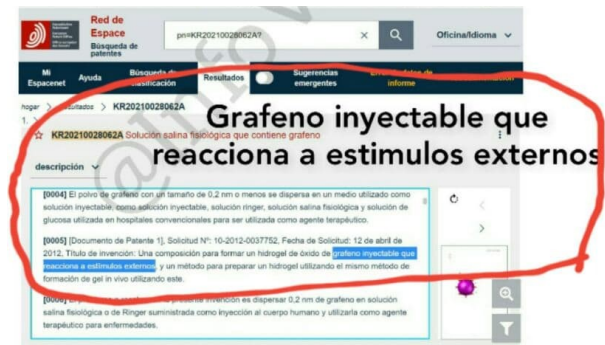

July 13

published a **2nd Patent** (actually a 2nd and a 3rd) in -state: Pending- consisting of physiological saline with graphene, intended to be used "for all diseases", and administered by multiple routes (injected, drunk, inhaled, etc.). I do various publications

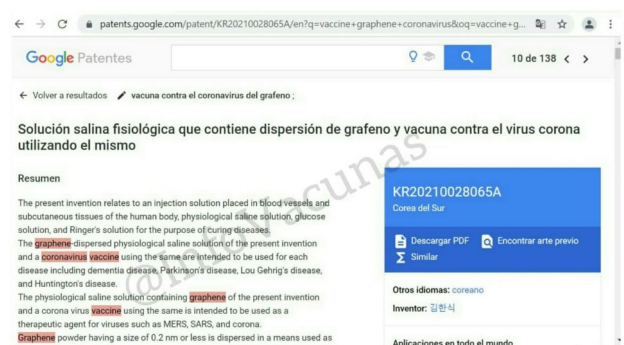

* actually the 2nd Patent, there are 2 twin patents: one for "physiological serum with graphene", and one for "physiological serum with graphene, which is also valid for Corona vaccines". The absurdity of the fact that the same guy, Kim Han Sik, applies for 2 identical patents -since both are valid to be used against Corona virus- highlighting in one of them very expressively in the title that also applies to Corona vaccines, is mentioned in later posts and videos. I attend him to "want to make sure his part of the cake", since the 2 are Patents of Aqueous Solution with Graphene, and in the 2 it is mentioned that they are used for vaccines against Corona virus).

Patent physiological serum with graphene 1
 Publication: <https://t.me/InfoVacunas/2151>

Patent KR20210028062A

Patent physiological serum with graphene 2
 Publication: <https://t.me/InfoVacunas/2152>

Patent KR20210028065A

The first patent mentioned above was for Aqueous Solution with Graphene + Covid drug. These 2 are Aqueous Solution with Graphene WITHOUT Covid drug).

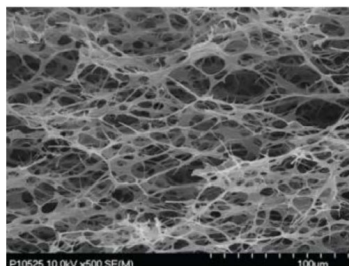

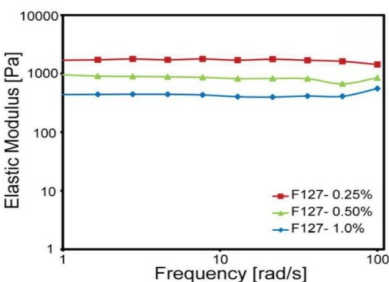

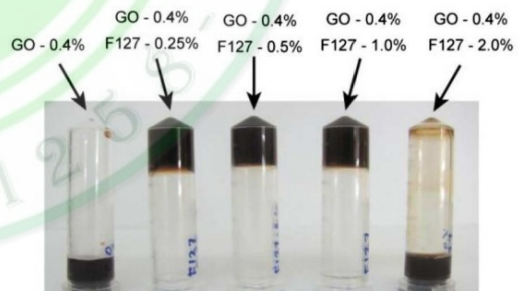

The same day, July 13

I publish a document found through an Application Document code, provided as a reference within the 2 patents for Aqueous Solution with Graphene WITHOUT Covid drug.

The document is dated 2012, and contains the results of a study conducted on the use of physiological saline with graphene in mice.

Real images of an open mouse with graphene inside are shown, graphs of frequencies, temperature, elastic modulation, etc. Images of Aqueous Solutions with Graphene are also shown under a microscope.

Publication: <https://t.me/InfoVacunas/2153>

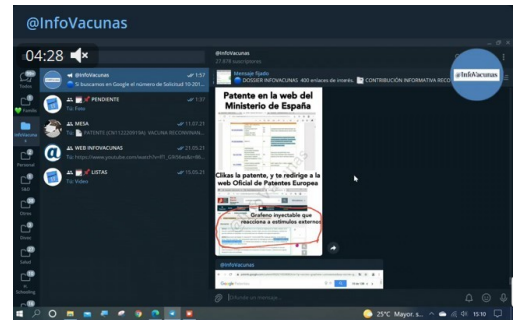

The same day, July 13

I record a video exposing the existing confusion in the alternative information media between the first patent found and the second -in fact the second and third-.

I return to explain that the first patent is real and I expose the fact that they still do not clarify the situation.

I also explain the difference between the first patent (**Aqueous Solution with Graphene + Covid drug, for exclusive use in Covid vaccines**) and the second patent - actually second and third - (**Aqueous Solution with Graphene WITHOUT Covid drug, administrable in many ways, and for many diseases, it is also valid for use in Covid vaccines**).

Video: <https://t.me/InfoVacunas/2154>

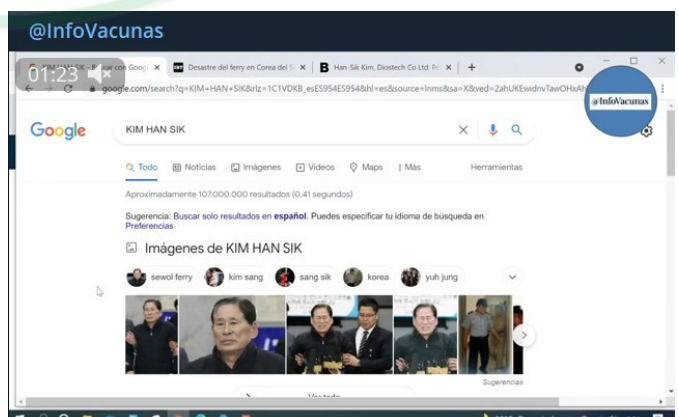

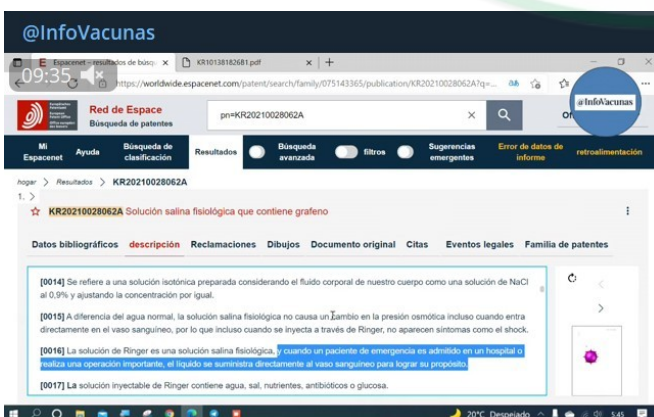

July 14

I record a third video fully explaining the Patent of physiological serum with graphene (the Aqueous Solution with Graphene WITHOUT Covid drug, valid for many diseases, and administrable in many ways -the 2 twin patents-)

I also expose who Kim Han Sik is, the applicant for the 2 twin patents, what he does, and show how he was sentenced to 10 years in prison for the involuntary manslaughter of 300 people for loading a ship more than allowed and sinking it. Cataloged the biggest catastrophe in South Korea.

Video with english subtitles: <https://t.me/InfoVacunas/2623>

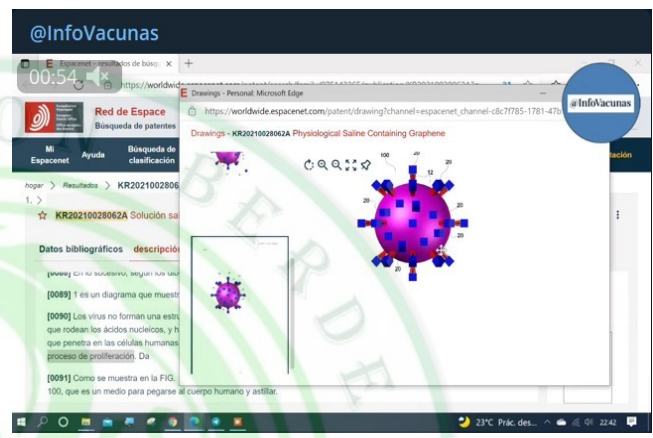

Original video in spanish: <https://t.me/InfoVacunas/2155>

July 15

I record another video talking about the second patent (that of physiological serum with graphene WITHOUT Covid drug) and I expose the problems of its use, **pointing to these Aqueous Solutions with Graphene** -used for multiple medical applications and administered by many routes- **as the primary cause of the Covid-19 and the Magnetic Effect**, in addition, I expose what is the primary root of the problem; the gross mistake of allopathic medicine: believing that viruses cause disease.

These aqueous solutions are based on the fact that the graphene introduced into them plugs the protrusions of viruses, that is, the communication pathways of exosomes, which are the messengers between cells, and the cells cannot transmit information correctly. This occurs since the beginning of the use of said Aqueous Solutions with Graphene worldwide (everything indicates that in 2012), being the cause of the Magnetic Effect, and with the increase in frequency from 3G, to 4G, and 4G Plus, and turn on now With intermittent 5G pulses, we have approached the absorption band of the element graphene, which has been excited and all the non-degraded graphene in our body has oxidized, causing multi-organic failures, with a new characteristic symptomatological picture (Covid-19 symptomatology). In the video I disseminate bibliography on True Medicine, and I present my opinion about the erroneous vision of allopathic medicine.

Video: <https://t.me/InfoVacunas/2156>

July 16

I show that the first patent (that of Aqueous Solution with Graphene + Covid drug) is real in a third way. Finding the patent on the China Patent Official website (CNIPA).

Publication: <https://t.me/InfoVacunas/2168>

1- Encontrando la patente china ORIGINAL y comprobando su URL en la caché de Google (15-1-2021)

2- Encontrando la patente en la web de Patentes Oficiales Europeas

3- Encontrando la patente en la web Oficial de Patentes de China (CNIPA)

DE 3 MANERAS HEMOS DEMOSTRADO EN @INFOVACUNAS QUE LA PATENTE ES REAL

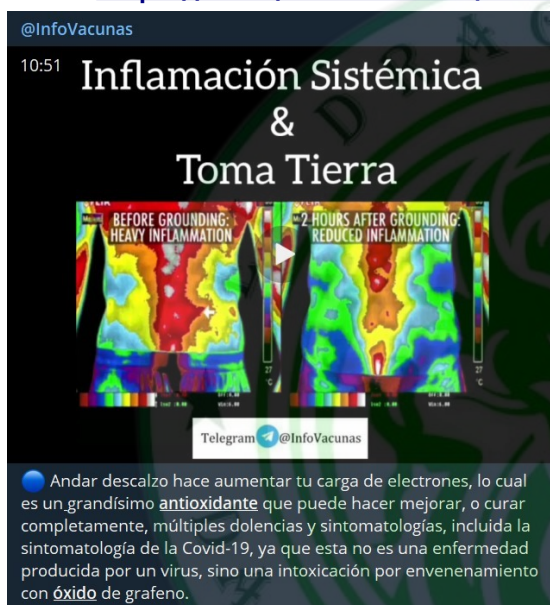

* although the following publications made on July 16 would be included within the group of -to this day- hundreds of publications on this issue, and are included in the compilation list of 70 publications mentioned above and, therefore, would not enter directly within the research on Magnetic Effect and Aqueous Solutions with Graphene mentioned in this Report, (no more than as a mention in said list) also, I consider it pertinent to show them here and now because of their sovereign importance.

The same day, July 16

-Despite having already published, in previous days, various publications with scientific studies on natural dietary antioxidants such as glutathione- **I publish the largest existing natural antioxidant solution for the body; the Earth Connection.**

I publish 2 videos, one with the scientific explanation, and the other with an explanation for children with cartoons.

Video: <https://t.me/InfoVacunas/2173>

Video: <https://t.me/InfoVacunas/2174>

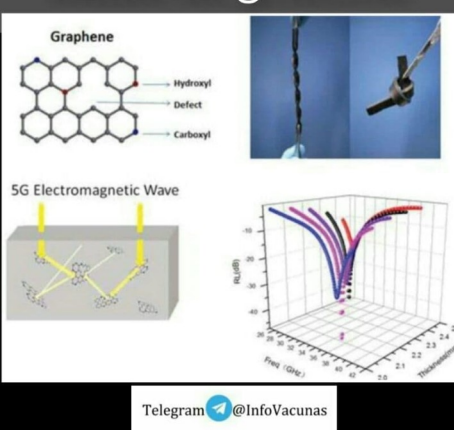

The same day, July 16

I publish a scientific study in which it is exposed how graphene is the perfect material that allows the absorption of almost all the 5G emission.

Graphene is the optimal material for this, because it is the material that achieves the lowest rate of reflection of electromagnetic waves and, therefore, it is the ideal material to absorb the entire 5G emission frequency.

Publication: <https://t.me/InfoVacunas/2183>

Absorción de ondas electromagnéticas de frecuencia 5G en materiales de óxido de grafeno

July 17

Fabián Carvia Devereux interviews me from Argentina, in his radio program El que Sirve a la Madre, broadcast every Saturday live at 3:00 p.m. Argentine time (8:00 p.m. Spanish time) on [RadioLaSeñal 97.7FM](https://www.radio.laseñal.com.ar/) (I publish the interview 2 days later, the day 19).

It is the first information medium that gives voice to the issue and seriously echoes research.

(With the exception of some Telegram groups, such as [@Grabatuhospital](https://t.me/InfoVacunas) -videotape your hospital- and some more, which have been echoing the investigations from the beginning).

HIGHLIGHT

During the interview, I talk about a personal empirical study, (undocumented) carried out on almost 50 people, **all NOT vaccinated against Covid**. The study includes statistically different people; from babies, to the elderly, people from the city, people from the countryside, people who take medication, people who do not, people who eat healthy, people who do not, and so on.

40 of the 50 people analyzed, I was able to verify magnetism mainly in the chest, and in some cases magnetism in higher areas, such as the neck, forehead, and head in general.

This means that 80% of the analyzed subjects report magnetism, of greater or lesser intensity.

Some of the subjects the magnetic force is highly powerful, while in other subjects the magnetism can be almost imperceptible, and experience in this practice is required to locate the specific points of the body where magnetism is perceived.

In none of the cases, an apparatus response in the subject was found, specifically apparatus for measuring electric and magnetic fields, with measurement of microwatts / cm², volts / meter, and microteslas.

A strange intermittence is also reported. Depending on the moment and situation, I can confirm an increase or decrease in magnetism in certain subjects analyzed, to the point of **completely disappearing, and reappearing days later.**

July 19

one week after the start of the research focused on Patents and Aqueous Solutions with Graphene, and after receiving dozens of private messages from subscribers of my channel informing me that they have already sent the information to the main alternative information channels in multiple occasions, and to see that these, incomprehensibly for everyone, are not echoing such information for some strange and unknown reason ...

above, Digital Alert appears and publishes a news item that I qualify as a

"smokescreen", where it seems to echo my research, but no. Actually, what Alert Digital does is launch a smoke screen to continue making people believe that they are "Patents of Covid vaccines with graphene", and they do not explain anything of everything that was exposed during the previous week on my channel.

The main alternative information media (now yes ..) echo the news (-smokescreen-) of Digital Alert, and continue to ignore all the information they have been receiving for 1 week through the followers, via messages private.

In the chat of **burbuja.Info**, the investigation has been discussed several times.

At [this point, dated July 20](#) (9 days after the first patent was posted) we can see some opinions, and I quote verbatim by making copy paste:

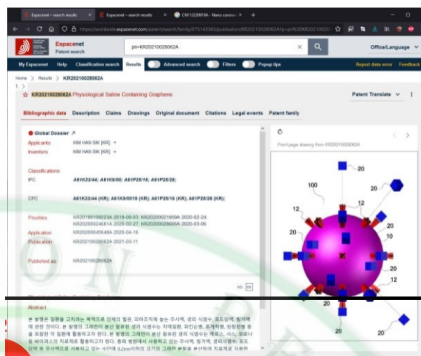

The Infovacunas channel has been documenting it for more than a week, and it has not deserved the attention of anyone and not even of The Fifth Column. I repeat, it seems to me that it is information that needs to be analyzed and subjected to scrutiny to verify its authenticity, and not instead be deliberately hidden or left aside.

For more information visit the [InfoVacunas channel](#)

[Here](#) you can read the Original writing written on the website of @Docuteca.

alertradigital.com/2021/07/17/las-patentes-de-oxido-de-grafeno-en-vacunas-

Las patentes de óxido de grafeno en vacunas Covid existen y son reales

Gonzalo Carlos Novillo Lapeyra.- Hay al menos tres patentes de vacunas Covid que contienen grafeno, son reales y están alojadas en las siguientes Oficinas de Patentes:

– Oficina Europea de Patentes

July 20

I do various publications and news related to Kim Han Sik (the applicant for the 2 Patents of Aqueous Solution with Graphene WITHOUT Covid drug) and the companies in which he works or worked as a director.

I showed who he is, and what he does.

Managing Director of CoAsia Optics
Electronic Medical Equipment and Products

Former Managing Director of S-Mac Co Ltd
Manufacture of Radio Broadcasting and Wireless Communication Devices

Former CEO of Chonghaejin Marine Company Ltd.
Merchandise transports

In 2014, Kim Han Sik was sentenced to 10 years in prison for the involuntary manslaughter of 300 people when reloading a ship of his company Chonghaejin more than allowed, and sinking it.

Publication involuntary manslaughter: <https://t.me/InfoVacunas/2226>

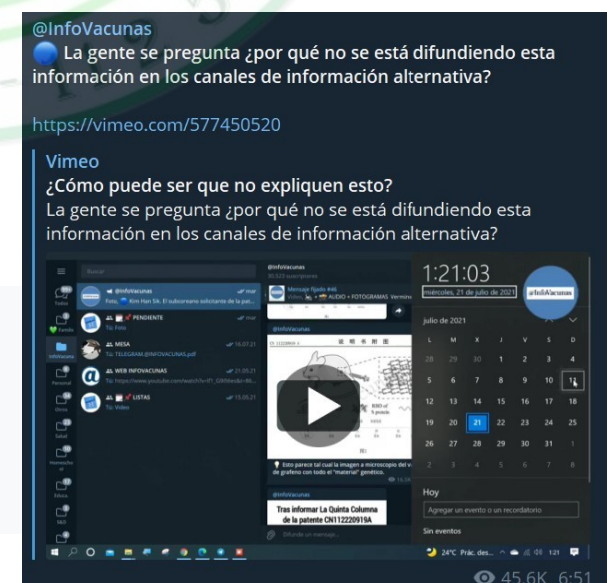

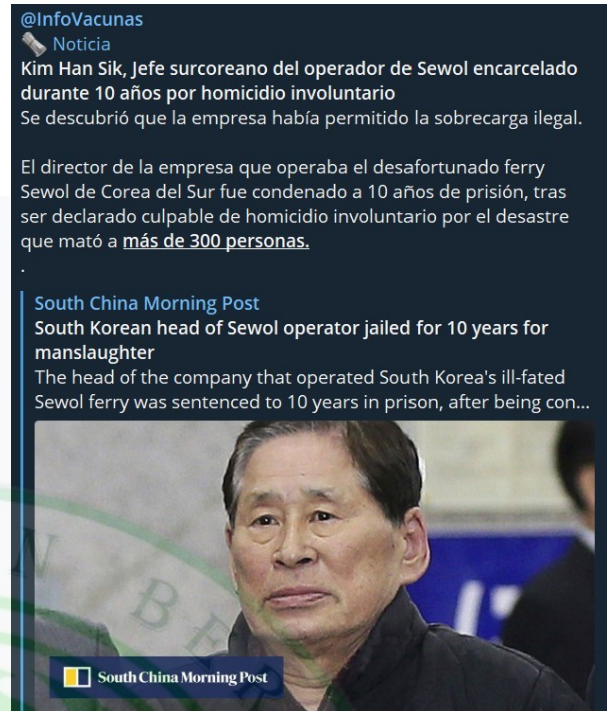

Publicación business: <https://t.me/InfoVacunas/2238>

July 21

pushed by the dozens of private messages from followers asking me: “How can it be, knowing that the information has reached them 10 days ago, that the alternative media are not explaining all this, which in theory, are the ones who cutting edge of this topic?”

before the absolute silence of the alternative media, after 10 days of having received the information (said by the followers), and before the apparent perception (perhaps erroneous and just a confusion ...) **that a smokescreen is rising...**

I record a video titled:

How can they not explain this?
Video: <https://t.me/InfoVacunas/2240>

In the video I clearly expose what both I and the followers of my channel are perceiving, I explain how they continue to omit this information, they still do not show the first real patent, the ORIGINAL one with graphene + Spike protein, and without explaining that the Patent It consists of an Aqueous Solution with Graphene as a carrier base of the molecular charges of mRNA and the recombinant proteins of the RBD region -Receptor Binding Domain- of the Spike protein to the cells, they keep repeating that the cause of graphene poisoning is Covid vaccines -and flu vaccines- and self-protection elements, when they have had all the correct information for 10 days, and continue to spread biased information.

I state that, in my opinion, a "smokescreen for deniers" has been raised, because they lead us to think that if you do not use masks, PCR, hydro-alcoholic gels, or Covid or flu vaccines, you are safe, making it go unnoticed that patents are **PHYSIOLOGICAL SERUM administrable in many ways, usable for all diseases, and used in multiple medical applications.**

In the video I openly reply to all my followers that "I don't know why they are not spreading this information, ask them."

July 22 and 23

I receive calls from different alternative information media, and private messages. Among them the main news outlet on this issue, La Quinta Columna.

All of them claiming the same thing: "not having realized the importance of the investigations" ... I accept *the boat as an aquatic animal and we move on, we are all in the same fight and we must all row together.*

On the following days, 24, 25, 26, and onwards, **both La Quinta Columna and various information media began to echo the investigations.**

La Quinta Columna hangs various publications, and they develop the subject in various videos.

The blog of **Despertaes.org**, makes a very good [post](#).

Mention is also made in various other blogs, for example **Richard Parker's Alternative Library of Documents and Archives**; [publication](#).

Placing us in 1st place in a small list of alternative Spanish-speaking news channels.

In **Orwell City** they also echo the investigation; [publication](#)

Ejercito Remanente also joins the diffusion; [post1](#) / [post2](#)

And some foreign media also echoes the investigation (I do not have links).

At the end of the investigation presented in this report, Adrián from Trikooba.com echoes the entire investigation, making a splendid writing in [this publication](#).

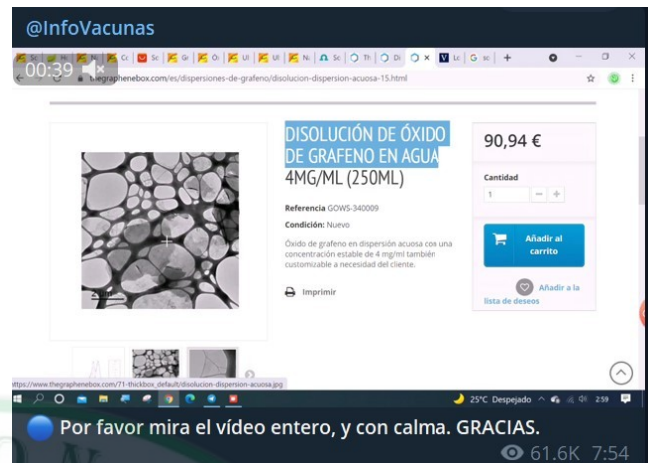

And **Tierrapura.org** Adrián's news is also echoed in [this publication](#).

The same day, July 23

I publish another important video: I show how I found the "Aqueous Solutions with Graphene" **FOR SALE**, used for various uses, among them: "medical and biological applications".

I'm also talking about the XFNano company, the world's first graphene company and the main graphene distributor since 2009, relating to the fact that after 3 years, in 2012, the first video of a magnetic man appeared on TV, and also on 2012 we have the first study document in mice with Aqueous Solutions with Graphene.

Video: <https://t.me/InfoVacunas/2244>

July 24

I post a saga of 8 screenshots that I have searched and found of Aqueous Solutions with **MAGNETIC Graphene** and **MAGNETIC Graphene Powder** (to dilute in water) for sale on the internet.

Publication: <https://t.me/InfoVacunas/2256>

Polvo de óxido de grafeno **MAGNÉTICO** para añadir a soluciones acuosas

Las aplicaciones

Copuesto a óxido de grafeno cargado con nanopartículas magnéticas Fe₃O₄, el óxido magnético de grafeno posee muchas funciones, incluyendo capacidad de respuesta magnética, propiedades catalíticas, que se pueden utilizar para la separación magnética de biopartículas, contaminación del medio ambiente, materiales compuestos de construcción de polímero dopado, construcción de nano portadores de drogas, Desarrollo de métodos de detección y detección biológico, etc.

Utilizadas como bases líquidas en la fabricación de productos médicos

Es muy probable que la causa de la Covid-19 y el Efecto Magnético sean las disoluciones acuosas con óxido de grafeno utilizadas para la fabricación de las bases líquidas de los productos médicos e industriales.

Solución acuosa con óxido de grafeno

Utilizada como base líquida en la fabricación de productos médicos

The same day, July 24

I speak more widely of the company **XFNano**, which sells **Aqueous Solutions with MAGNETIC Graphene** for medical and biological applications, among others.

Publication: <https://t.me/InfoVacunas/2258>

No. No es el dibujo de un "virus chino" expandiéndose por el mundo.

Es un dibujo de las exportaciones de la primera y principal empresa de grafeno del mundo.

XFNANO es la primera empresa de grafeno del mundo y la principal distribuidora internacional.

Fue fundada en China en 2009, y en 2012 apareció el primer vídeo de un hombre magnético en TV.

XFNANO tiene más de 20.000 clientes en todo el mundo y les suministra soluciones acuosas con óxido de grafeno magnético utilizables para la fabricación de las bases líquidas de múltiples y diversos productos médicos e industriales.

Estas soluciones acuosas están siendo usadas hace años, desde en bases líquidas de pinturas, selladoras, quita grasas y pulverizadores, hasta en la base líquida de todo tipo de vacunas, sueros fisiológicos, inyecciones diversas (analgésicos, epidural, etc.) y medicamentos bebibles e inhalables.

Estas soluciones acuosas con grafeno son la causa primaria del Efecto Magnético. (por eso también están magnéticos los no vacunados)

Y lo más probable que también sean (por la excitación del grafeno a causa del aumento de frecuencia hacia el 5G) la causa primaria de la Covid-19.

@InfoVacunas 78.6K editado 6:04

July 27

I record a video showing **companies that sell products that contain graphene in their aqueous liquid base**, and could enter the body in some way, inhaled, ingested, etc.

I am talking about the manufacture of products with graphene in all industrial branches, but focusing on those that could get into the body and intoxicate us.

Vídeo: <https://t.me/InfoVacunas/2275>

July 31

Fabián Carvia Devereux interviews me for the second time on his live radio program (I post the recorded audio a few days later).

HIGHLIGHT

During the interview, I reveal the latest research carried out, not yet published; I explain that I have **discovered an important patent** from 2006, which closes the circle: How to make an Aqueous Solution with Graphene that will serve as a carrier base for mRNA and proteins (Covid drug) to cells.

Audio: <https://t.me/InfoVacunas/2364>

August 3

I publish a **BOMB** that has sounded in the alternative information media like a small firecracker in the middle of the night of San Juan.

The Bomb that I publish is a 2006 Patent approved in **2012** (once again we go back to 2012 as a possible date of the beginning of the massive introduction of graphene in the population, and the beginning of the magnetic effect) requested by Stanford University, and the United States government has rights to the Patent.

The Patent is extremely revealing ...

It describes the specific operation of Covid "vaccines" (actually, we know that Covid vaccines are not vaccines, but injectable gene therapy drugs, which are called "vaccine" without being so).

Exactly, it describes how to create an aqueous base with graphene (in its rolled form; called nanotubes -NT-, or carbon nanotubes -CNT-, single-walled SWNT or SWCNT) and 3 functionalizing polymers. This aqueous base will serve to load the "drug" (mRNA and proteins) to be taken to the cells and release it there.

So in 2012 there was already an approved Patent for Aqueous Solution with Graphene + Covid drug.

@InfoVacunas

ATENCIÓN ENCONTRADA PATENTE DE 2006

EN LA PATENTE SE DESCRIBE EL FUNCIONAMIENTO DE LAS VACUNAS COVID

Recibir de moléculas a través de transportadores que penetran en las células para ser usados de fármacos, genes o proteínas.

de pócima acuosa con 3 polímeros para funcionalizar el grafeno:

- 1-2-Distearoyl-sn-Glycero-3-Phosphatidylcholine
- 3-Polyethyleneglycol (PEG)

Telegram @InfoVacunas

ONALIZANTES NECESARIOS PARA ELABORAR Y DESCRIBE LA PATENTE, SON LOS MISMOS LAS VACUNAS COVID...

¡ATENCIÓN!

ESTA PATENTE ES MUY IMPORTANTE

CERRANDO EL CÍRCULO

PATENTE AL DESCUBIERTO

ENCONTRADA PATENTE

EN LA QUE SE DESCRIBE EL FUNCIONAMIENTO DE LAS VACUNAS COVID

CÓMO HACER UNA BASE ACUOSA CON GRAFENO ENROLLADO (nanotubos) + 3 POLÍMEROS

Y CÓMO UTILIZAR ESA BASE ACUOSA COMO TRANSPORTADOR DE MOLÉCULAS DE ARNm Y PROTEÍNAS A LAS CÉLULAS

Y LOS 3 POLÍMEROS NECESARIOS PARA LA PÓCIMA...

¡¡¡ESTÁN EN LAS VACUNAS COVID!!!

¡¡¡EN LAS VACUNAS COVID!!!

Cómo crear una base acuosa funcionalizando grafeno con 3 polímeros y usarla como transportador de "fármacos" de ARNm y Proteínas a las células. Y los 3 están...

Let us remember that at the beginning of all the research carried out I started with a Covid vaccine patent, the one of July 11, the first, in the Pending Request status, which consists of exactly the same thing: loading the molecular charges (mRNA) and recombinant proteins (Spike Protein) on a graphene platform (an Aqueous Solution with Graphene) to be delivered to the cells. I close the circle.

That is, both the first patent shown from 2021

- **Aqueous solution with Graphene + drug** "Covid" (mRNA and proteins)

Like this last one discovered from 2006/2012

- **Aqueous solution with Graphene + drug** (mRNA and proteins)

describe exactly the same thing:

how to create an Aqueous Solution with Graphene in which to load the "drug" (mRNA and proteins) to be taken to the cells; (the operation of Covid vaccines).

Only in one they call it DRUG and in the other they call it VACCINE.

But, as if that were not enough, in addition, to top it all, and linking with the previous research published on July 28 and 29 on **the aqueous base used in Pfizer and Moderna** vaccines and the raw material used that appears on the list. of ingredients of these vaccines given by the CDC (Polyethyleneglycol) and scientific studies on functionalization of graphene with PEG (polyethyleneglycol), on top ...

it turns out that ...

ATTENTION

The Patent when describing how to make the aqueous base with graphene, into which the "drug" (the mRNA and protein molecules) will be embedded, specifies 3 specific ingredients:

Polyethyleneglycol2000 / 1,2-Distearoyl-sn-Glycero-3 / Phosphoetanolamide

And all 3 are in the ingredients of the Pfizer and Moderna vaccines:

Polyethyleneglycol2000 / 1,2-Distearoyl-sn-Glycero-3 / Phospho and amide

* minus ethanol, possibly withdrawn for compatibility issues in later years.

* the patent specifies 2 varieties of potions, each with 3 elements (the 2 very similar). Specify that it can be one of the varieties (1), or with an amine ending and the second variety (2)

The second variety is the one mentioned in this table, which comparing the Phosphoetanolamide with the ingredients of the Pfizer we see that it has the Phospho, (Phosphocholine) and one with the ending amine (idem that amide) (ditetradecylacetamide). Moderna does not have an amide ending, but has an ingredient from the first potion (methoxyPolyethyleneglycol). Everything fits.

To explain it, I shoot a long video in which the first half is a summary of all the research done over the weeks that has brought me to this point, to put us in context, and then I describe the Patent and the graphic. The full video lasts more than 1 hour, and it is the closing of my research. Since I have already found an answer to the questions he asked me and drawn conclusions that I consider very clear. Conclusions that will be exposed below. I also do a 25 minute video-summary talking only about the second half; of the patent and the graphic. And I end with a 6 minute ULTRA-SUMMARY video, showing the patent and the ultra-summary graphic.

PATENTE de 2006 de la Universidad de Stanford (y el gobierno de EEUU tiene derechos sobre ella)

CÓMO UTILIZAR NANOTUBOS DE CARBONO (grafeno enrollado) y CIERTOS POLÍMEROS ESPECÍFICOS FUNCIONALIZANTES, PARA ELABORAR UNA BASE ACUOSA QUE SERVIRÁ COMO TRANSPORTADORA DE ARNm Y PROTEÍNAS A LAS CÉLULAS (fármaco Covid)

La patente describe como hacer una base acuosa con: (Grafeno + 3 Polímeros)

Donde acoplar el fármaco: (ARNm y Proteínas)

Para ser transportado a las células y liberarlo.

Telegram @InfoVacunas

[0009] Ahora se ha descubierto sorprendentemente que la funcionalización no covalente de SWNT se puede lograr uniendo proteínas a los nanotubos mediante varios mecanismos, incluida la fuerte adsorción de fosfolípidos inertados con cadenas de polietilenglicol (PEG).

liberación intercelular de moléculas a través de transportadores que penetran en las células para terapias de fármacos, genes o proteínas

Inactive ingredients "Base acuosa"	polyethylene glycol (PEG)-2000; 1,2-distearoyl-sn-glycero-3-phosphocholine	PEG2000; 1,2-dimyristoyl-rac-glycerol, methoxypolyethylene glycol; 1,2-distearoyl-sn-glycero-3-phosphocholine

BEFORE THE END

Several days later..

- Magnetic food videos are being shown, especially in the group just opened a week ago: <https://t.me/alimentosmagneticos>

and in the group: <https://t.me/alimentosmagnetizados>

- Videos have been posted of personal stories of people who are beginning to realize that graphene has possibly been put into the physiological serum that they injected in the hospital

- Also videos of magnetic drugs

- And of everyday products such as cosmetics

And also, a person who is an ex-employee of Pfizer has appeared speaking in foreign television programs assuring that there is graphene in vaccines although in Moderna's patent it says that it is a "secret ingredient" because its aqueous base uses certain polymers lipid nanoparticles pegylated that serve to functionalize graphene in Aqueous Solutions used in mRNA vaccines.

What I've been saying for days.

Pegylated

"PEGylation is the process of covalent and non-covalent bonding or fusion of polyethyleneglycol polymer chains to molecules and macrostructures, such as a drug, a therapeutic protein or a vesicle, which is later described as PEGylated."

That is, she is saying exactly the same thing that I explained in the last patent, she is stating that she is assuming that there is graphene since they are inserting lipid polyethylene glycol nanoparticles.

But, it tells you that as it is the Moderna patent, graphene does NOT appear in it because it is a "secret ingredient".

Well, in mine DOES GRAPHENE COME OUT, and he says it very clearly, what's more, the whole patent is spent talking about how to functionalize the peg with graphene, and with mRNA molecules and proteins.

And on top of that, it tells you exactly what specific polymers along with the peg you need to make the Aqueous Solution, and those exact polymers, along with the peg, are in the Aqueous Solution of Pfizer vaccines, and Modern...

"Your Honor, I have no further questions."

In summary

On May 14th with the first video of magnetic vaccines, we discovered that vaccines leave magnetic arms.

I do the test with my son (not vaccinated, only the first vaccine to be born 10 years ago, inoculated by nurses treacherously and without warning -and he almost died-)

My son has a magnetic chest.

I understand that, THEY ARE NOT JUST THE VACCINES.

On June 19, we posted the first magnetic food video. But I consider that me and my son follow the same diet, and I am NOT magnetic. So, IT'S NOT JUST FOOD AND VACCINES.

I keep pulling the thread, why is my son magnetic?

On June 28, Campra shows us the report with the images of the Pfizer vial comparing it with stock images of graphene, but what exactly is that image so similar to that of the vial that La Quinta Columna is using to compare the image? of the vial with this so similar?

It took me days to answer this question, but I did: it is an Aqueous Solution with Graphene, but at that moment I still did not realize it.

On June 29 (you have to understand that aside, I already had dozens of publications on nanotechnology and graphene) I published 22 sites where you would not expect to find graphene. I understand that IT IS EVERYWHERE, since although many of these sites are still just projects, it is clear to me that when they openly disseminate a technology to the public, they usually have actually been using it for decades.

I look for a bibliography, I find 5 videos of magnetic men aired on TV, the first in 2012. I understand that in 2012, THERE WERE ALREADY GRAPHENED PEOPLE.

On July 11, with the first patent, it is clear to me that they are using graphene as a base, mesh, or transport platform for molecular charges and recombinant proteins, but... WAIT... when thinking about the vial of any vaccine, I realize that, in the little drawing of the mouse, the graphene, the spike protein, and the syringe, a graphene platform comes out, but the vials are like water, aqueous, they are Aqueous Solutions, THE GRAPHENE IN REALITY, IT'S IN THE AQUEOUS SOLUTION !!!

Therefore the vial of the Pfizer analyzed by Campra, what you are seeing, is an Aqueous Solution with Graphene.

(on July 12 I waste time explaining that the patent is real)

On July 13 I published a second patent (actually a second and third) of son of PHYSIOLOGICAL SERUM

And everything begins to fit together, graphene is in an Aqueous Solution, used for many things, such as serum in hospitals, and can be administered in many ways.

And I publish a 4th patent, for physiological serum as well, that is, an Aqueous Solution with Graphene, from 2012.

On the 13th I waste time explaining that the first patent is real again, and on the 14th and 15th I keep talking about the second (actually second, third, and fourth) patent.

On the 17th they interview me and tell about my personal study on magnetism in humans carried out on more than 50 people today, all of them NOT Covid vaccines.

The alternative media keep saying that vaccines leave the magnetic arms...

On May 14, I already knew that it IS NOT ONLY the vaccines, and that it IS NOT ONLY in the arm, and that it IS NOT ONLY for pcr, masks, gels, etc. Since my son, as well as dozens of the people analyzed in my study who are magnetic without being vaccinated against Covid, have NEVER EVER used masks, gels, or pcr (nor flu vaccine).

On the 21st I record a video saying clearly that what is happening? Is information being withheld, and are smoke screens being raised for deniers?

They keep repeating that it is the vaccines, and the masks, and it is FALSE. And they have the information from the beginning, and they are ignoring it, and on top of that they come out saying smoke screens? It's over. Here the clear things.

The next day I receive calls from La Quinta Columna and other channels, saying that "they have passed the info ..." and they begin to post the information. Although little, and in a trickle.

On the 23rd I am still thinking, if graphene is in Aqueous Solutions...: we are going to look for aqueous solutions with graphene. And I find them.

Aqueous Solutions with MAGNETIC Graphene for medical and biological applications. In addition, the image that the manufacturer shows, under a microscope, of these aqueous bases, is the same image as that of the Pfizer vial, and that of the image used by La Quinta Columna as a comparison.

I post a saga of 8 of these products for sale, I record more than one video, and days later I publish another saga of 11 more products.

On the 24th I investigate XFNano, everything starts to fall into place. Perfectly.

I think, my son does not take medication, we do not go to the hospital, he does not take anything, and he is magnetic, therefore, HE IS NOT ALONE IN THE MEDICATIONS, IN THE PHYSIOLOGICAL SERUMS, IN THE FOOD, IN THE VACCINES... I am discarding, it has to be somewhere else.

On the 27th I publish how I find multiple products for sale, made with Aqueous Solutions with Graphene. Products from all industries. Focusing ONLY on those that can get into the body.

I publish PDFs. with products as an example of how such aqueous bases are being used in multiple products. **I'm beginning to understand where my son may have entered, and not me: sun creams, shampoos, soaps, colognes, baby creams, and so on.**

I NEVER USE ANYTHING AT ALL. Only soap when showering. Nothing more. Here could be the key to how it has come to my son and not me: through the many existing products in the world made with these aqueous bases.

I think of the Aqueous Solution used in the Pfizer vaccine, and I think of looking for any indication in the ingredient list that they have added graphene. And I find it, the PEG. I find that it is used to make aqueous superplasticizers, and these are also made with graphene. I find studies on how to functionalize PEG and graphene.

And then I see that the CDC has added a note below the ingredient list, 2 weeks after starting the Magnetic Effect videos, saying "there are no metals" and washing the face of the PEG. But who has? said nothing about the PEG?????

They have been discovered.

They knew that if someone pulled the thread, it would lead them to PEG-functionalized Graphene Aqueous Solutions for mRNA vaccines. And they have been ahead of my investigation, they put that note to excuse themselves before someone explains.

On August 3, I publish 1 VERY IMPORTANT patent (actually 3, since there are 2, and inside they add a 3rd as a reference).

From 2006 describing HOW TO MAKE AN AQUEOUS BASE WITH GRAPHENE AND 3 POLYMERS (the PEG and 2 more, in fact the entire patent is spent talking about how to functionalize the peg and prepare the Aqueous Solution with Graphene) WHERE TO LOAD THE mRNA and Proteins, to be carried into cells.

That is, for 16 years there have been Patents for Aqueous Solutions with Graphene, where to load mRNA and proteins.

At this point, I really felt ashamed of the ridicule that all apparently educated people, known, professors and medical eminent people are making, who keep repeating that the "theory" of graphene in vaccines is not justified at all.

When they have existed for 16 years, and enter the field of their supposed PROFESSIONAL SPECIALTIES...

PERSONAL THEORY

* Theory: An organized set of ideas that explain a phenomenon, deduced from observation, experience, or logical reasoning.

Before 2005 Aqueous Solutions with Graphene were already being developed. The use was limited and almost "restricted."

In 2005 and 2006, the first Patent Applications for Aqueous Solutions with Graphene + mRNA and proteins were issued. Remaining in "pending".

During the years 2007 and 2008 the theme was developed further.

In 2009, the first and main company in the world to distribute graphene worldwide, XFNano, appears, openly marketing Aqueous Solutions with Magnetic Graphene for medical and biological use, and for the manufacture of medical products, and other industries. (Company located next door, from Wuhan).

This company reaches 20,000 clients. All over the world. Medical laboratories, Universities of Medicine, Pharmaceuticals, all kinds of companies that manufacture products from all industries, etc. And each company, each one of those 20,000 clients, is possible that it manufactures different types of products of its industrial branch, and of each branch it manufactures hundreds, thousands, or millions of those products throughout the year. With what having 20,000 customers to sell graphene to be used for the manufacture of products of all industries, **means HUNDREDS OR THOUSANDS OF MILLIONS of products manufactured with Aqueous Solutions with Magnetic Graphene since 2009.**

Products that are NOT medical products, have also been entering our body through various routes, such as skin or inhaled, since we do not know for sure which products have been manufactured with these aqueous bases, and which ones. Since there is no regulation on this, manufacturers are not required to specify it.

I understand that there may have been an expansion phase, so it is logical to think that when it opened in 2009, XFNano still did not have 20,000 clients, since it has been obtaining them progressively as said clients / companies have developed more products with these Solutions Aqueous with Graphene.

During 2010 and 2011, these Aqueous Solutions with Graphene were being distributed for the first time in the world, reaching our body in different ways. But the use was not widespread. As of 2012, its use extends enormously, to the medical field (medicines, serums, vaccines, etc.) and also to the rest of the industries.

In 2012, the first study of the patent of Aqueous Solution with Graphene of physiological serum appeared.

In 2012, the 2006 patents for Aqueous Solution with Graphene + mRNA and proteins were approved.

And in 2012 the first magnetic man appears on TV.

It's so strange that the guy gets listed in the Guinness Book of Records for sticking spoons on his chest.

More cases continue to appear, in 2014, 2016, 2017, and 2019...

During all these years, graphene has been gradually introduced to the world population, AS the frequency emitted by the antennas has increased, from 3G to 4G to 4G Plus.

And in 2020:

They turned on 5G in Wuhan. After 1 and a half months, the first case appeared in Wuhan.

And the statistical study of the biologist Bartomeu Payeras makes clear the subsequent relationship between subsequent ignitions in other countries and the "Covid outbreaks".

Since 2012, graphene has been openly introduced to the entire population through, above all, medical products and medical applications, but also with products such as creams, dusting sprays, shampoos, soaps, and all kinds of products made with liquid bases.

In food, OFFICIALLY, it is the only industry that in theory these Aqueous Solutions with Graphene are not being used. But, patents have been found for pesticides with graphene, therefore, it is very possible that they are using these Aqueous Solutions with Graphene for the manufacture of the liquid base of the pesticide that they are going to spray on food such as plants and fruits and, although they are not officially using Aqueous Solutions with Graphene for food, it DOES end up in food.

Meat food, it is very possible that they have already used these Aqueous Solutions with Graphene in the medication and vaccination of animals.

Food wrappers, medicines, miscellaneous objects, food containers, etc. it is also highly probable that such aqueous bases were used during the manufacturing process.

The videos of food in which magnetic dust comes out, quite possibly that is not graphene, since graphene is not introduced as visible dust. Graphene is impregnated throughout the product or food (if they use these Aqueous Solutions with Graphene in food, which, as we will see shortly, yes). The dissolved graphene in these Aqueous Solutions with Graphene is nano-sized. It is not seen with the eyes. That must be metals (which should not be at all, of course).

Like what you see in water after the electrolysis test, it is not graphene either. They are metals. And they've been there for at least 15 years that I know of.

I explain it in the @InfoVacunas Channel, since **I have years of experience as a professional in water analysis, having analyzed THOUSANDS of network water from all areas of Barcelona (Spain) and surroundings, and also ALL brands of bottled water in the market, as well as multiple private well waters.**

To date I have shown 7 patents; ALL OF AQUEOUS SOLUTIONS WITH GRAPHENE

1 Aqueous Solution with Graphene + mRNA and Spike protein (2021)

2 Aqueous Solution with Physiological Serum Graphene (2021)

3 Aqueous Solution with Graphene of physiological serum (2021)

4 Aqueous Solution with Graphene of physiological serum (2012)

5 Aqueous solution with Graphene + mRNA and proteins (2006 approval 2012)

6 Aqueous Solution with Graphene + mRNA and proteins (2006 approval 2012)

7 Aqueous Solution with Graphene + mRNA and proteins (2005 approval 2012)

The graphene in these Aqueous Solutions can be in 2 forms;

in nanotubes (coiled mesh), to be used as a transporter of the molecular charges of mRNA and proteins to the cells and, in theory, the nanotube must degrade after entering an internal endosome of the cell and releasing the "drug", the MRNA and proteins

and in mesh, to be used among other things as a "purifier" of the water in the Aqueous Solutions that will later be used for the manufacture of multiple products, or directly introduced as physiological saline in hospitals, with the graphene being directed to plug the pathways of communication of exosomes, cellular messengers (viruses), causing a slow and progressive organic failure (or fast, if the 5G frequencies make it become excited and oxidize quickly, producing rapid intoxication).

In both cases, the researchers state that graphene will be degraded by the body, but I refer to the tests of millions of magnetic people around the world and a new global symptomatology with the same symptoms associated with graphene poisoning that: apparently **graphene is NOT degrading** as they state what happens in studies.

Graphene has accumulated in the body and made people magnetic. As the frequency has increased towards 3G, 4G, 4G +, we have been approaching the resonance frequency of the element graphene and, now reaching 5G, graphene has been rapidly excited and oxidized, generating the exact symptomatological pictures described in multiple scientific studies, such as the symptoms caused by graphene poisoning: what they call Covid-19.

END

PS: Days later ...

At the end of the investigation on August 3, I began this writing and, almost at the end of it, on August 20:

I FIND THE LAST PIECE THAT I WAS MISSING;

I record a video in which I show how I have found a company that sells **Aqueous Solutions with Graphene** on the internet for various applications, including medical applications, cosmetic applications, and...

The key to everything: Aqueous Solutions with Graphene used in all industries

There are 3 clear areas of application, in which the graphene in these Aqueous Solutions ends up entering the body:

1- MEDICAL. Applications include:

Medicines and medical supplements, introduced by various routes, ingested, inhaled, inoculated, by dispersion through ultrasonic machines, physiological serums, vaccines and other pricks (epidurals, analgesics, antibiotics) and so on.

2- COSMETICS, CLEANING, PAINTS, Applications include:

- all kinds of body creams, beauty creams, masks, protective creams, moisturizers, revitalizers, shampoos, gels, soaps, paints, putties, additives for concrete, greasers, coatings, primers, sealers, oils, greases, waxes, polishes, plasticizers for mixtures, and so on.

3- FOOD. The applications within this field are not yet clear, but I have already shown that these Aqueous Solutions with Graphene are also being used for food applications.
